

French National Psoriasis Clinical Trial Network

REPSO

The French psoriasis research group is part of the French Society of Dermatology. It was created in 2005. The French National psoriasis clinical network (REPSO) is supported by the CeNGEPS since 2011.

The main objective of REPSO is to conduct and promote scientific studies in psoriasis to advance patient care.

MISSIONS :

To act as a professional and reactive network for the conception and implementation of clinical and therapeutic studies in psoriasis.
To ensure rapid execution and high quality of clinical studies from phase II to phase IV.

KEY ASSETS

Clinical Academic and Scientific expertise in psoriasis

- a network of experienced investigators and coordinators
- more than 10 years international experience in phase II to IV studies
- partnership with pharmaceutical companies for conception, implementation and publication of therapeutic studies

Coordinated implementation of both simple and complex clinical studies

- acceleration of study start-up and execution
- coordinated evaluations of study costs and procedures

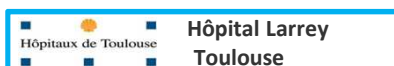

Fully equipped Centers of investigation

- large panel of technical equipments (centrifuges, freezers, standardized pictures, research lab facilities)
- an updated documentary bank of CVs, qualifications, and certifications of technical equipments.

Optimization of patients recruitment

- procedures to facilitate and improve the patients inclusions in compliance with GCP and regulatory procedures
- a common database to follow the patients availability at each centers
